

NRX's VPS™ Delivery external parts catalog application to be connected to mySAP™ Product Lifecycle Management

Toronto, Canada, March 14, 2002 - NRX Global Corp (LSE;AIM:NRX) today announced that its Visual Parts System (VPS™) Delivery, an electronic solution for visual parts catalog and maintenance documentation, will be one of the first third-party catalog applications to be supported and connected to mySAP™ Product Lifecycle Management (mySAP™ PLM). VPS Delivery is one component of NRX's total digital data solution for maintenance.

"The agreement demonstrates recognition of the integrity of NRX's integration software and our understanding of how maintenance catalogs fit into maintenance workflows and enterprise systems," said Paul Gray, CEO of NRX.

"It further emphasizes NRX's ability to deliver a secure and seamless connection between the customer's parts and technical equipment data and work order management in mySAP PLM, maintenance planning and procurement applications," said Gray. "The end result of the integration from NRX to mySAP PLM leads to improved maintenance productivity and enhanced enterprise system functionality for our customers."

In July 2001, NRX became an SAP Software Partner achieving SAP Open Catalog Interface certification for its interface to the e-procurement capabilities of the mySAP™ Supplier Relationship Management (mySAP SRM) solution. The SAP Open Catalog interface and a subsequent integration software module to the plant maintenance capabilities of mySAP PLM Asset Life-Cycle Management were jointly developed by NRX and Berlin based Wessendorf Software and Consulting (WSC). They comprise part of VPS Connect™, NRX's set of interfaces enabling data exchange between VPS and leading enterprise systems.

As part of recent agreements, SAP has adopted the NRX/WSC PM Integration Module as part of a standard mySAP PLM interface to external parts catalogs. The interface will be generally available with the forthcoming release of SAP R/3® Enterprise, an integral part of the mySAP PLM solution.

"Our established relationship with SAP ensures we remain on the cutting edge of integration applications with SAP business solutions, enabling us to jointly enhance functionality for maintenance users of SAP solutions and NRX's large industrial customers," said Gray.
