

NRX solutions combine web-based technology, content management and business process know-how to improve the accessibility of information and decision-making in asset-intensive industries.

NRX's [Asset Content Management \(ACM\)](#) establishes a reliable data foundation for efficient planning and execution of plant maintenance.

NRX's [Visual Parts System \(VPS\)](#) simplifies access to equipment and parts information.

NRX's [Visual Information for Plants \(xVIp\)](#) enables users in maintenance, operations and engineering to share information across multiple applications and business processes.

NRX solutions address these issues:

- Time-consuming, manual information sourcing is the biggest barrier to plant productivity and asset optimization
- Up to 90% of existing asset information is paper-based, outdated and poorly organized
- Stand alone systems are difficult for users to access and use
- Electronic data in ERP, EAM and other systems is largely unvalidated and incomplete

NRX solutions deliver these benefits:

- Time-consuming, manual information sourcing is the biggest barrier to plant productivity and asset optimization
- Increased plant availability and reliability
- Increased maintenance productivity
- Improved safety and environmental compliance
- Reduced parts inventory
- Efficient workforce knowledge capture
