

- Link between your maintenance management system and VPS Delivery's visual parts catalog
- Reference VPS parts diagrams and identify the right parts for work orders
- Query your materials system to locate parts in inventory
- Send selected parts information to the work order to initiate procurement
- Maintain up to date equipment & Inventory SKU information

VPS Connect, NRX's integration platform, links VPS Delivery with your maintenance management systems, providing a close connection between your technical data and visual parts information, and your work order management, maintenance planning inventory procurement applications.

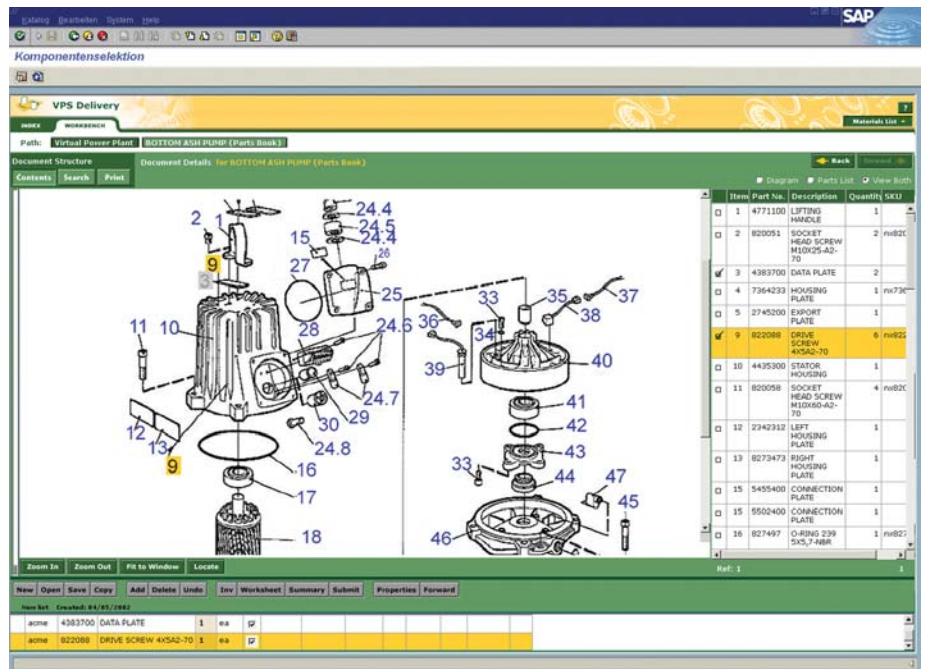

NRX partners with leading enterprise solution providers, including SAP and Indus. These partnerships deliver value to our customers by ensuring secure, seamless, and successful deployment of the VPS equipment information system within their enterprise.

The benefits of integrating VPS with maintenance management systems include improved maintenance productivity, extended enterprise system functionality and enhanced usability on the shop floor.

Integration of VPS Delivery with enterprise systems, such as mySAP™ PLM or Indus Passport, enables users to link back and forth between their work order or materials request page and VPS Delivery's visual parts catalog.

Fast track the identification of parts for work orders

Using VPS, planners can quickly reference illustrated parts diagrams, identify the right parts for work orders, select and locate parts in inventory and submit their VPS material lists to their enterprise system work order. The end result is faster and more accurate identification of parts for repair orders, and no time wasted searching through paper manuals.

Enhance the usability of your enterprise system on the shop floor

Designed by maintenance engineers for use on the shop floor, VPS Delivery's user-friendly interface simplifies access for planners, technicians and materials management personnel who need to visually reference parts diagrams, maintenance manuals and technical drawings to effectively manage planning, inventory, maintenance work execution and procurement activities.

Maintenance Management System

Connect without changing existing workflows

VPS Connect's open and extensible architecture means that VPS Delivery can be easily integrated into your existing maintenance workflows - without altering critical automated work order management processes. Based on industry supported Enterprise Application Integration standards such as XML, OAG, OCI and cXML, VPS Connect greatly reduces the resources and effort required to tightly integrate the VPS Solution into your existing maintenance procedures and best practices.

VPS integrates seamlessly with SAP and Indus

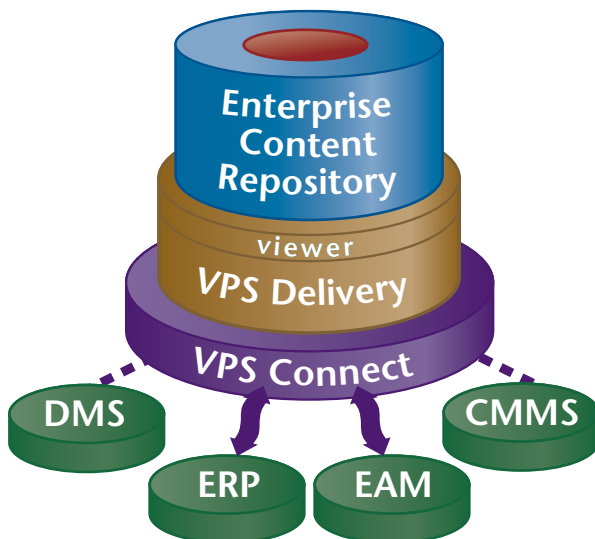

Established relationships with SAP and Indus ensure we remain on the cutting edge of integration applications with leading enterprise maintenance management systems, enabling us to jointly enhance functionality for our customers.

NRX is proud to be a mySAP.com® Software Partner with a certified interface to industry leading SAP procurement solutions. VPS Delivery™ will be one of the first third-party catalog applications to be supported and connected to mySAP™ Product Lifecycle Management (mySAP™PLM). Our partnership with SAP supports our goal of achieving a functionally rich integration with SAP solutions to better meet the business needs of our industrial customers.

VPS does not duplicate existing system functionality or database resources

NRX works closely with IT departments to determine integration requirements and to avoid duplicated effort and resources. VPS' flexible, open architecture ensures ease of integration and deployment.
